# Tufline® HF valves have been proven through years of service in hydrofluoric acid applications.

Hydrofluoric acid is important in dozens of industrial applications. Yet, it can be a difficult and hazardous fluid to handle. Tufline HF valves have proven themselves with years of service in thousands of installations.

Easily accessible adjustment bolts assure tight internal and external sealing.

The unique design of the multiple seals provides superior protection against external stem leakage, assures long service life, and reduces maintenance requirements.

A proven fire tested top seal design is standard on all HF valves.

Valves are available in a variety of corrosion resistant materials for every HF application.

The lightweight design makes installation easier and more economical. The compact configuration requires less space in your processing system and permits more design flexibility.

The PTFE sleeve fully surrounds the plug. This assures a continuous primary seal that needs no lubrication. Line leakage through a Tufline valve in the closed position is virtually impossible. This is an important safety consideration.

The 360° port defining lips, originally developed by Xomox, prevent sleeve cold flow, protect against sleeve erosion, and retard media infiltration behind the sleeve.

A vent hole in the bottom of the plug allows hydrofluoric acid to vent back into the waterway. This eliminates the possibility of trapping the acid below the plug.

## Approved for the most demanding HF requirements

The Phillips Petroleum HF Alkylation Process Specifications provide the standards for valves being installed in most new alkylation systems, worldwide. Tufline valves manufactured for the Phillips HF process are listed by Phillips Petroleum for use in their licensed systems. You can specify Tufline HF valves that meet these special Phillips Petroleum design and material requirements and testing criteria for your application. (See pages 4 and 5 for detailed Phillips Petroleum HF alkylation valve specifications.)

## Tufline valves for other HF applications and processes

Tufline HF valves are also available to meet a variety of alternate design specifications, including UOP. You can also choose from a number of optional features. These valves are designed to meet the requirements for other HF alkylation processes and any hydrofluoric acid applications. (See pages 6 and 7 for detailed specifications.)

*With proper procedures and quality equipment like Tufline valves, hydrofluoric acid can be handled safely in a wide variety of applications.*

## Tufline Valves for Petroleum Alkylation Processes

Tufline HF Valves are listed in Phillips Petroleum Company's HF Alkylation Process Design Specification Manual and meet UOP specifications.

Tufline valves ordered for the Phillips Petroleum HF alkylation process will be manufactured in strict accordance with the approved assembly and testing procedures, and with no deviation from material and design specifications.

### Materials of construction

Adjusting Bolts	ASTM B164, Monel
Cover	ASTM A216, Grade WCB carbon steel
Cover Nut	ASTM A194, Grade 2HM carbon steel
Cover Stud	ASTM A193, Grade B7M carbon steel
Thrust Collar	ASTM B127, Monel
Metal Diaphragm	ASTM B127, Monel
Stem Seal Ring	Flexible graphite
Formed Diaphragm	Virgin PTFE
Wedge Ring	Virgin PTFE
Cover Seal Ring	Flexible graphite
Plug	ASTM A494, Grade M-35-1
Sleeve	Virgin PTFE
Body	ASTM A494, Grade M-35-1 or M-30-C* Monel
Paint	HF acid detection paint
Tag	304 Stainless Steel
Plastic Cable Tie	Plastic

\*M-30-C monel may be used only for 1/2 to 1 1/2 inch 0366 valve bodies. All other size valve bodies are of M-35-1 monel.

### Finish requirements.

All finished valve assemblies, excluding actuator fasteners and actuator mounting hardware, are painted with one coat of HF acid detection paint.

### Testing requirements.

All valve body castings are subjected to 100% radiography of all critical areas of each casting. Each valve body is hydrostatic shell tested at 1 1/2 times its rated working pressure. Completed valve assemblies are tested at 80 psig air for seat integrity.

### Ordering procedures.

Valves must be ordered by drawing number. There can be no deviations from specifications and no other options are available. The following table references conventional sizes and figure numbers with the Phillips listed drawing numbers.

Below: X-rays of valve bodies are inspected to assure casting integrity.

How to order: Specify Drawing Number.

**How to order**  
Specify drawing number and actuation.

\* At time of printing, drawing submitted for review but not currently approved or listed by UOP.

## Tufline valves for every hydrofluoric acid application

For other HF acid processing applications, Tufline offers choices of body materials and design options. Tufline HF valves can be ordered in the same sizes, end connections, and pressure classes that are available in standard Tufline plug valves.

Monel or carbon steel bodies are available. (All carbon steel bodies are sprayed with fluorocarbon behind the sleeve to protect against the build-up of iron fluoride scale.)

## Materials of construction

Adjusting Bolts	ASTM B164, Monel
Cover	ASTM A216, Grade WCB carbon steel
Cover Bolts	ASTM A193, Grade B7M carbon steel
Thrust Collar	ASTM B127, Monel
Metal Diaphragm	ASTM B127, Monel
Stem Seal Ring	Flexible graphite
Formed Diaphragm	Virgin PTFE
Wedge Ring	Virgin PTFE
Cover Seal Ring	Flexible graphite
Plug	ASTM A494, Grade M-30-C Monel
Sleeve	Virgin PTFE
Body	ASTM A216, Grade WCB carbon steel or ASTM A494 Grade M-30-C Monel
Paint	Sherwin Williams No. F65-G39 Industrial Kemlustral light green

During the assembly process the plug is coated with HF lubricant.

## Quick reference of available configurations

Size Inches	ANSI Class	Figure Number	Screwed End	Flanged End
1/2 to 2	150	066HF	X	
1/2 to 2	300	0366HF	X	
1/2 to 4	150	067HF		X
1/2 to 4	300	0367HF		X
4 to 24	150	067EG-HF		X
4 to 20	300	0367EG-HF		X
1/2 to 16	600DR	0667/DR-HF		X

All configurations listed above are available with monel or carbon steel bodies

Some of the applications in which Tufline HF valves have proven themselves are listed below:

HF alkylation	Casting cleaning
Acid regeneration	Organic fluorinating
Glass production	Inorganic fluorinating
Aluminum production	Fluorine production
Metallurgical pickling	Aluminum fluoride production
Filter paper purification	Uranium refining
Electropolishing of metals	Rocket propellant preparation
Stone and brick cleaning	Isomerization
Oil well acidizing	Condensation
Fermentation control	Dehydration
Ore dissolving	Polymerization

## Product responsibility.

Xomox's concern for product performance extends to the product's period of service. We feel it is important for users to also be aware of their responsibilities. Our products are manufactured and used in numerous applications with a wide variety of service conditions. While general guidelines are often furnished, it obviously is not possible to provide complete and specific performance data for every conceivable service condition. Therefore, the end user must assume final responsibility for proper evaluation, application and performance of all products. The contents of this document are presented for information purposes only. Every effort has been made to ensure accuracy. This information is not intended to be construed as warranties or guarantees, expressed or implied, nor imply use applicability, for products or services described herein. We reserve the right to modify or improve the designs and specifications of such products at any time without notice. As the manufacturer, Xomox sells its products and services pursuant to its standard terms and conditions of sale, including its limited warranty, copies of which are available upon request. Xomox limits its liability specifically to the replacement or repair of defective items, or to a refund for same. Xomox does not accept liability for any incidental or consequential damages.
