Tuflin[®] XP Sleeved Plug Valves

CRANE[®]

ChemPharma Flow Solutions

www.cranepharmaceutical.com

Superior fugitive emissions control.

Tufline® XP® Sleeved Plug valves provide exceptional sealing to atmosphere.

The primary top seal is at the plug.

A secondary seal is provided by live loaded packing at the stem.

Thermal cycling emissions control.

Even with thermal cycling, the patented shrink-seal lip assures stem sealing that meets or exceeds the most stringent regulatory requirements.

This little lip assures better emissions control.

During thermal cycling, when fugitive emissions are most likely to escape, this Tufline exclusive and patented shrink-seal lip tightens the seal.

Longer-lasting in-line sealing.

The inert PTFE sleeve completely surrounds the plug. The sleeve provides a full-circumferential sealing surface from port to port. Open, closed, or rotating, the seal is assured.

Performance proven.

Tufline Sleeved Plug valves have proven themselves with decades of trouble-free emissions control service in thousands of applications. Only Tufline valves offer exclusive emissions control attributes that are designed in, not added on.

A family of emissions control valves.

Tufline XP valves are part of a broad line of emissions control valves designed for a variety of applications and differing levels of emissions control requirements. Choose the Tufline valves that most economically meet your emissions control requirements.

Cost control.

Tufline valves pay for themselves many times over with lower maintenance, longer service life, and greater operating reliability.

Calculate the low long-term cost of these reliable valves and see how much they can save in your application.

More options.

- ANSI Classes 150, 300, or 600.
- Flanged, screwed, or weld ends.
- Fire tested to API 607, 4th Edition.
- Multiport configurations available.
- Monitoring port available.

To enhance protection against external leakage, PTFE chevron rings provide a secondary (redundant) pressure-assisted stem seal. A double packed stem with monitoring port is also available.

Easy to automate, quarter-turn operation.

A patented shrink-seal lip is machined in the interior bore of the bonnet. Any radial shrinkage of the PTFE packing causes the packing to compress tightly against this lip. This patented lip actually tightens the seal as the packing shrinks.

Live loaded spring washers provide a constant uniform pressure on the packing. The spring washers compensate for any expansion and contraction of the PTFE packing rings caused by temperature fluctuations.

The primary external seal is provided by the interaction of the surface of the plug, the circumferential sealing surface of the PTFE sleeve, and the valve body.

To protect the spring washers from damage and particle intrusion, they are completely enclosed.

Carbon graphite filled PTFE end rings prevent extrusion of the PTFE packing.

No body cavities.

PTFE cover seal.

The PTFE sleeve is chemically inert. It resists heat and stress cracking. Moisture absorption is negligible. It provides self-lubrication.

The engineered body bore employs high pressure cast ribs to assure tight in-line sealing. This assures the best possible concentricity between the plug and valve body.

Bi-directional flow.

306° port defining lips (introduced and patented by CRANE ChemPharma, XOMOX) surround the valve ports. As the plug turns in the resilient PTFE sleeve, these lips wipe off any residue or particles adhering to the plug. They also protect the sleeve from erosion, prevent cold flow deformation, and eliminate sleeve rotation.

Flanged End Dimensions.

Pressure-temperature ratings.

The useful range . . .

PTFE sleeve: -20°F to +400°F

Tufline-475 sleeve: -20°F to +475°F

Tufline-600 sleeve: -20°F to +600°F

. . . all with a maximum temperature variation of 200°F.

Applications beyond these ranges can be handled effectively but may require valve adjustments at the operating temperature or use of alternate sleeve materials.

Material selections are governed by the limits imposed by ASME B16.34, 2004 edition.

†Ductile iron values from ANSI B16.42

*This line indicates the limit for Tufline-475 sleeve material when used in 8"-16" valves.

CRANE ChemPharma, Xomox Rack & Pinion (XRP) Actuators and Matryx® Actuators.

Tufline automated valve packages assure you of single-source responsibility for flow control equipment.

With the Crane ChemPharma, Xomox family of valves, actuators, control accessories, and problem solving expertise, you are assured of valve packages that will provide optimum performance in your application.

CRANE ChemPharma, Xomox Automation & Service Centers.

Our Automation & Service Centers are strategically located to provide comprehensive:

- Automated valve packaging.
- Valve modification.
- Valve repair.
- Application counseling.

For more information, fast response, comprehensive service, and knowledgeable technical help, call your nearest CRANE ChemPharma, Xomox Automation & Service Center.

The CRANE ChemPharma, Xomox Special Products Group.

Our Special Products Group custom-designs, manufactures, and modifies valves.

CRANE ChemPharmaXomox Special Products valves are used in unusual, complex, or especially difficult applications.

Processors find that investing in these special valves pays off with greatly extended service life, improved overall operating efficiency, and reduced maintenance requirements.

Multiport valves.

Tufline XP Multiport Sleeved Plug valves bring economy and more compact system design to thousands of applications.

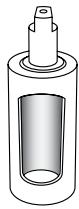

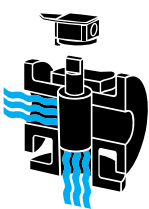

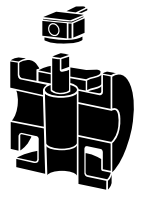

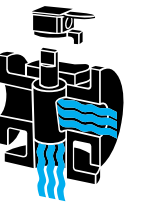

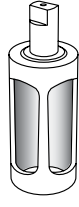

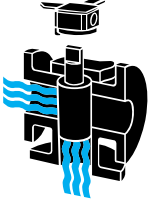

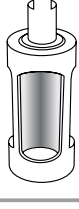

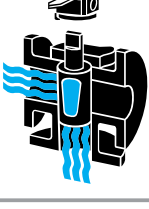

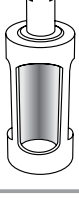

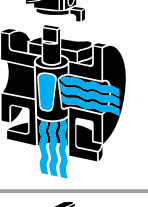

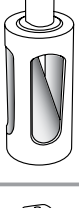

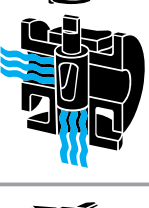

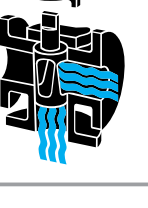

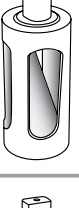

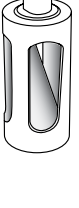

These valves are available through the CRANE ChemPharma, Xomox Special Products Group.

Bi-directional flow for more flexibility.

In the diagrams the color indicates the path of fluid flow. Bi-directional flow permits more system design options.

3-way arrangements.

Only the Type A plug will shut off the flow. With the Type AX, C, and D plugs, there is always flow between the bottom port and one of the side ports.
